Great set.

2 years ago

I have a diverse assortment of tools that includes both high-end options like those from Mac and Snap-on, as well as more affordable sets like Craftsman. Despite their varying prices, this is a great middle ground, especially when compared to my pricier mechanics tools. Plus, I recently found aftermarket inserts for these wrenches that fit perfectly into my packout organizer, making it a breeze to bring my tools to and from job sites.

✔ Yes, I recommend this product.

Nice but need more sizes and non-maxbite option

4 years ago

These are very good quality, I rate them up there with the best. But... for building custom cars and motorcycles we need non maxbite to not marr up the fasteners on our high end clients vehicles. I kinda like having all the same brand wrenches, but can't with Milwaukee because so limited in sizing. Would be nice to see 4.5mm all the way up to 36mm if not up to 42mm and yes we all like no skip sets haha. Im sure Milwaukee has the customer base for this expansion.

are too short. Having such a good bite to break fasteners loose in the rust belt doesn't do much good if you don't have leverage. A longer version would be perfect especially for alignment work.

Wonderful high-quality combination wrenches!

4 years ago

Well I used to buy Craftsman and have some very fine Professional grade sets, unfortunately despite their “lifetime” guarantee they are no longer made so I can never actually replace them if I were to break one. So, because of this, I started looking for some high quality Lifetime guaranteed wrench sets to modernize my tool sets. There are plenty available for sure, but I found them all to be pretty much identical and having a wide range of cost none of them inspired me, then I came upon these gorgeous wrenches from Milwaukee and really appreciated their innovation and high-quality construction. Now I will readily admit that nearly every feature of these wrenches is available from other MFR’s but interestingly no one offers them all together except Milwaukee and that was the deciding factor (along with their reasonable price) for me. The modified “I” beam shank design is really easy on your hands. I call it a modified “I” beam design because while these are clearly shaped like an I-beam Milwaukee Engineers rounded or tapered the more traditionally sharp edges to provide for much more comfort than the blade shank design and avoids the other “hot spots” from traditional I-beam designs, for me it is a perfect compromise. These also have large easy to read contrast painted size markings on them which doesn’t make you have to strain to see them when you are looking for that particular size even from a distance they’re easy to distinguish. Finally, and probably the best innovation/feature is their “max bite open-end grip”. Milwaukee has done a really great job solving some long-standing shortcomings of standard open-end wrenches by likely completely removing the tendency for them to round over fasteners and at the same time providing more grip than those same traditional open-end wrenches we have all been using for decades. I wouldn’t be honest if I didn’t mention that while the box-end is by no means thick and bulky it is not the thinnest wall available but to get a real thin wall combination wrench set you would need to spend 2 or 3 times what these cost and I don’t need them that thin for the kind of work I do, so for me, this is not an issue but you will have to decide for yourselves depending on what you are willing to spend and how you intend to use them. Needless to say, I am extremely happy with my decision to purchase these modern high-quality innovative combination wrenches and highly recommend them to others.

Milwaukee Combination Wrench Set

itself grip great second only to snap on flank drive plus but the price is so much better the only down fall is i find there are too short when you have a stubborn bolt/nut and there needs to be a set of larger sizes stopping at 22mm is not good enough. for a note I'm a die hard Milwaukee fan and user and im posting in hopes for improvements
