TieGrrr Straps

Product Description

TieGrrr straps are designed to be a safer, faster tie down than ropes or stretch cords. (Stretch cords are the leading cause of accidental eye loss in America) Knot tying is eliminated and there are no hooks to needlessly catch on objects and cause injury.

TieGrrr Straps last longer than rope or stretch cords and are more cost effective. These straps have been extensively tested both in the field and at the laboratory. The Web and Sling Association recommends a 3 to 1 safety factor. TieGrrr Straps have nearly a 5 to 1 safety factor at 250 pounds.

Our webbing is probably the strongest polypropylene on the market with a breaking strength of 1200 pounds. Strap "Ends" are angled and ironed for fast, easy insertion through the buckle and resistance to fraying.

TieGrrr Straps are designed to provide years of trouble free service with the highest quality materials, stitching and workmanship going into every strap.

Orange Strap - 12'
Super Grip Buckle Design

Ladder Tie Down - 3' Blue

Specifications

* Rating -	250 pounds
